

SFO THROUGH CRISIS: A PASSENGER STORY

Geneva Tovar

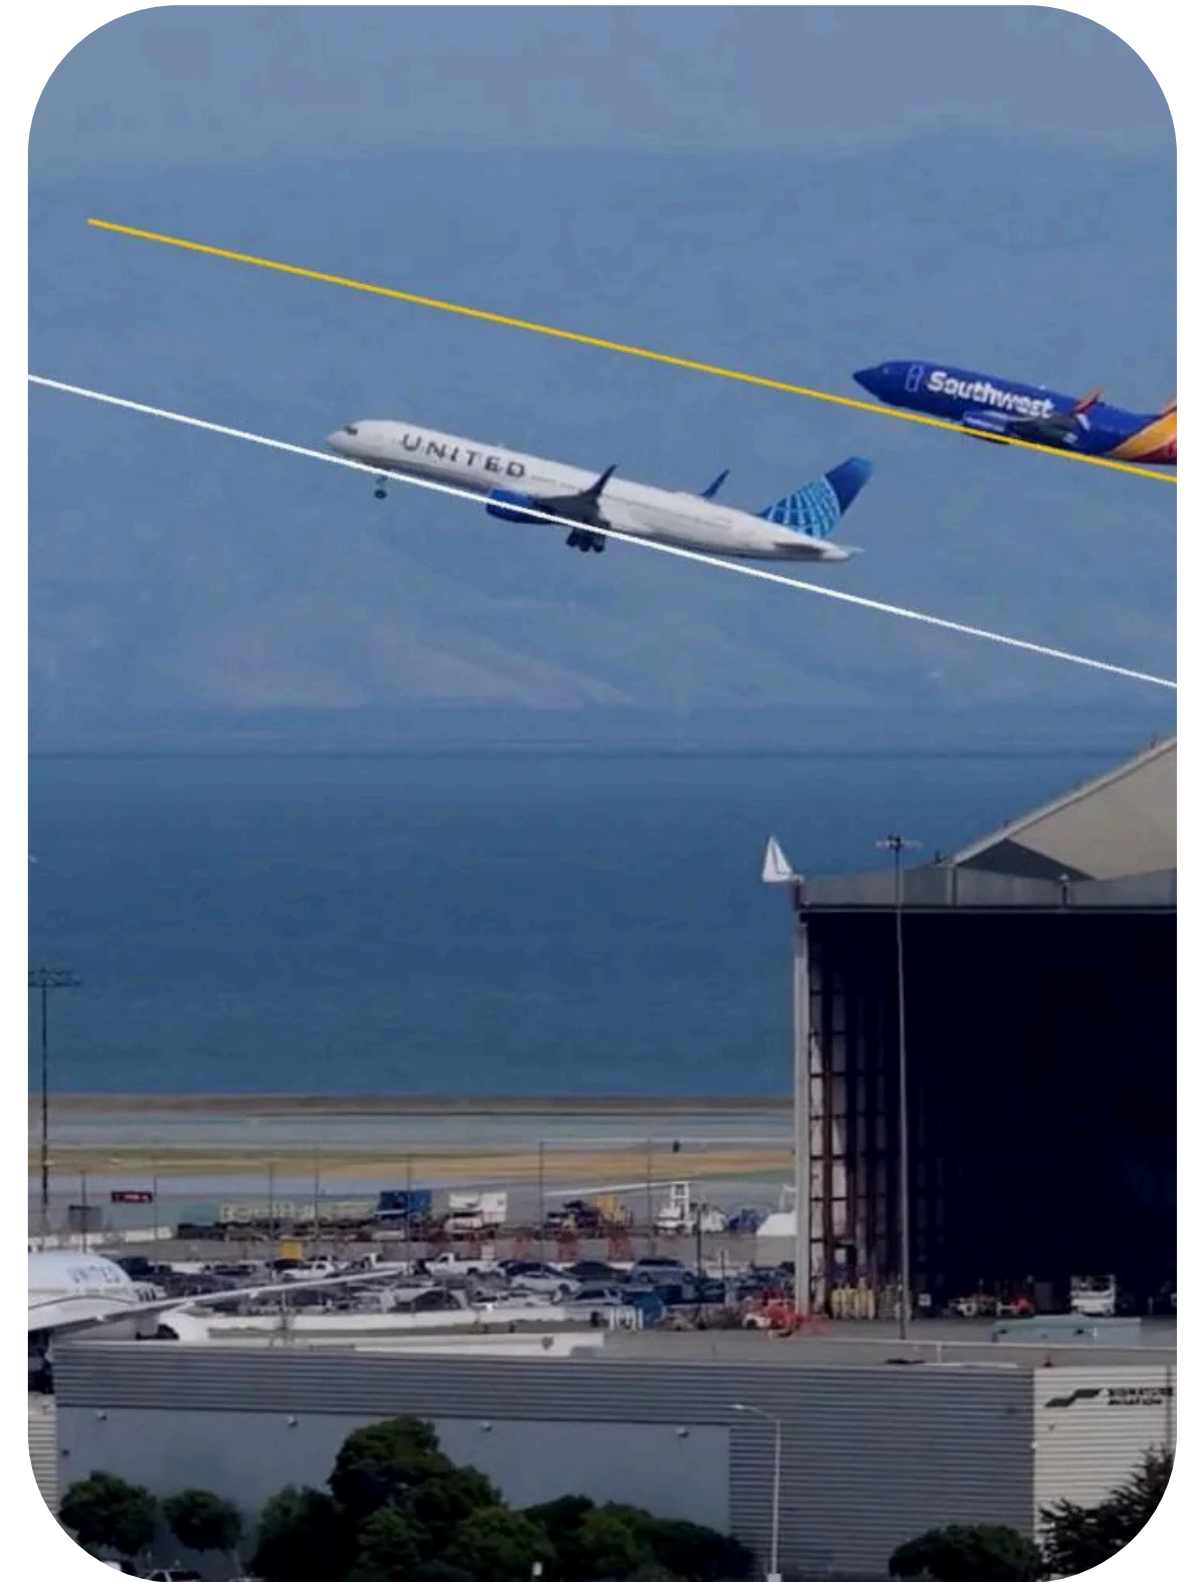

MOTIVATION & GOALS

- Frequent SFO flyer, and one of the best U.S. airports (museum exhibits, sensory rooms, dining)
- Sparked a question: how does SFO hold up during major disruptions?
- 9/11, the 2008 recession, and COVID-19
- What does disruption and recovery actually look like in the data?
- Dataset: SF Airport Commission via DataSF, monthly enplaned passengers from 1999 to present

OBJECTIVES

- Identify seasonal patterns and the full scope of each crisis across the calendar
- Visualize where international passengers were flying, and how destinations shifted across eras
- Compare domestic vs. international recovery pace across disruptions
- Track which carriers grew or pulled back after each crisis

Goals:
Priorities:
Deadlines to be aware of this week:
Challenges:

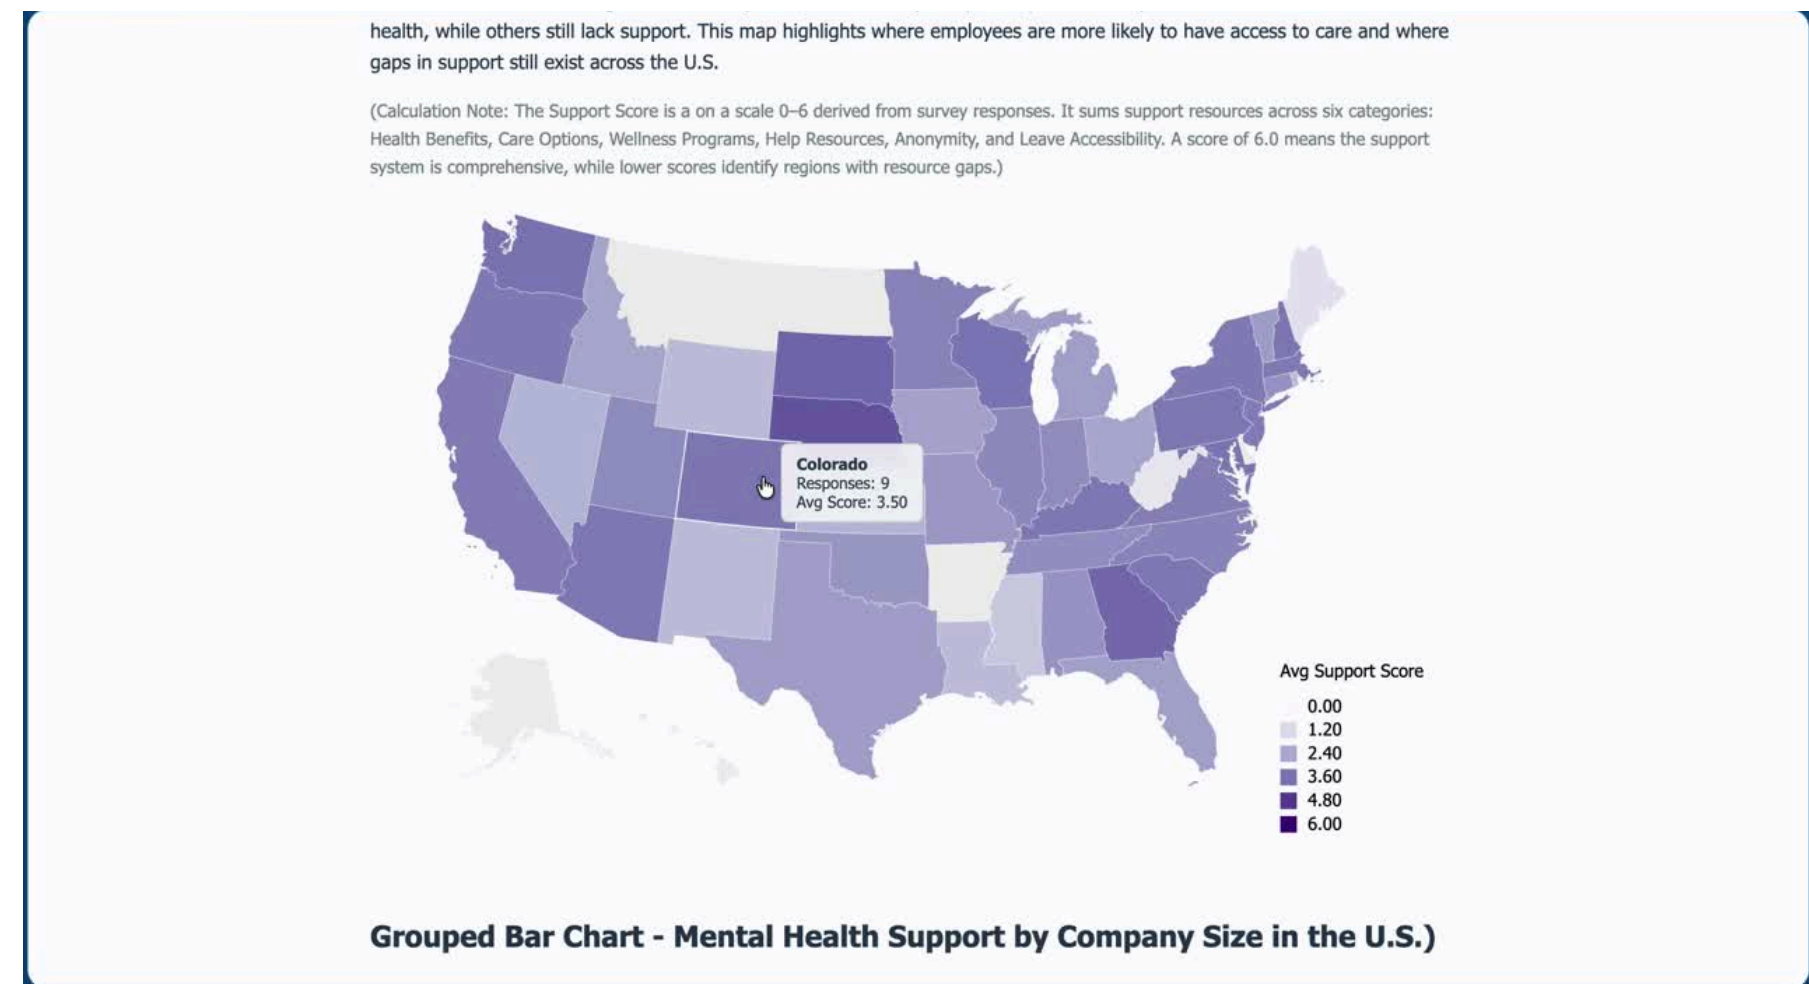

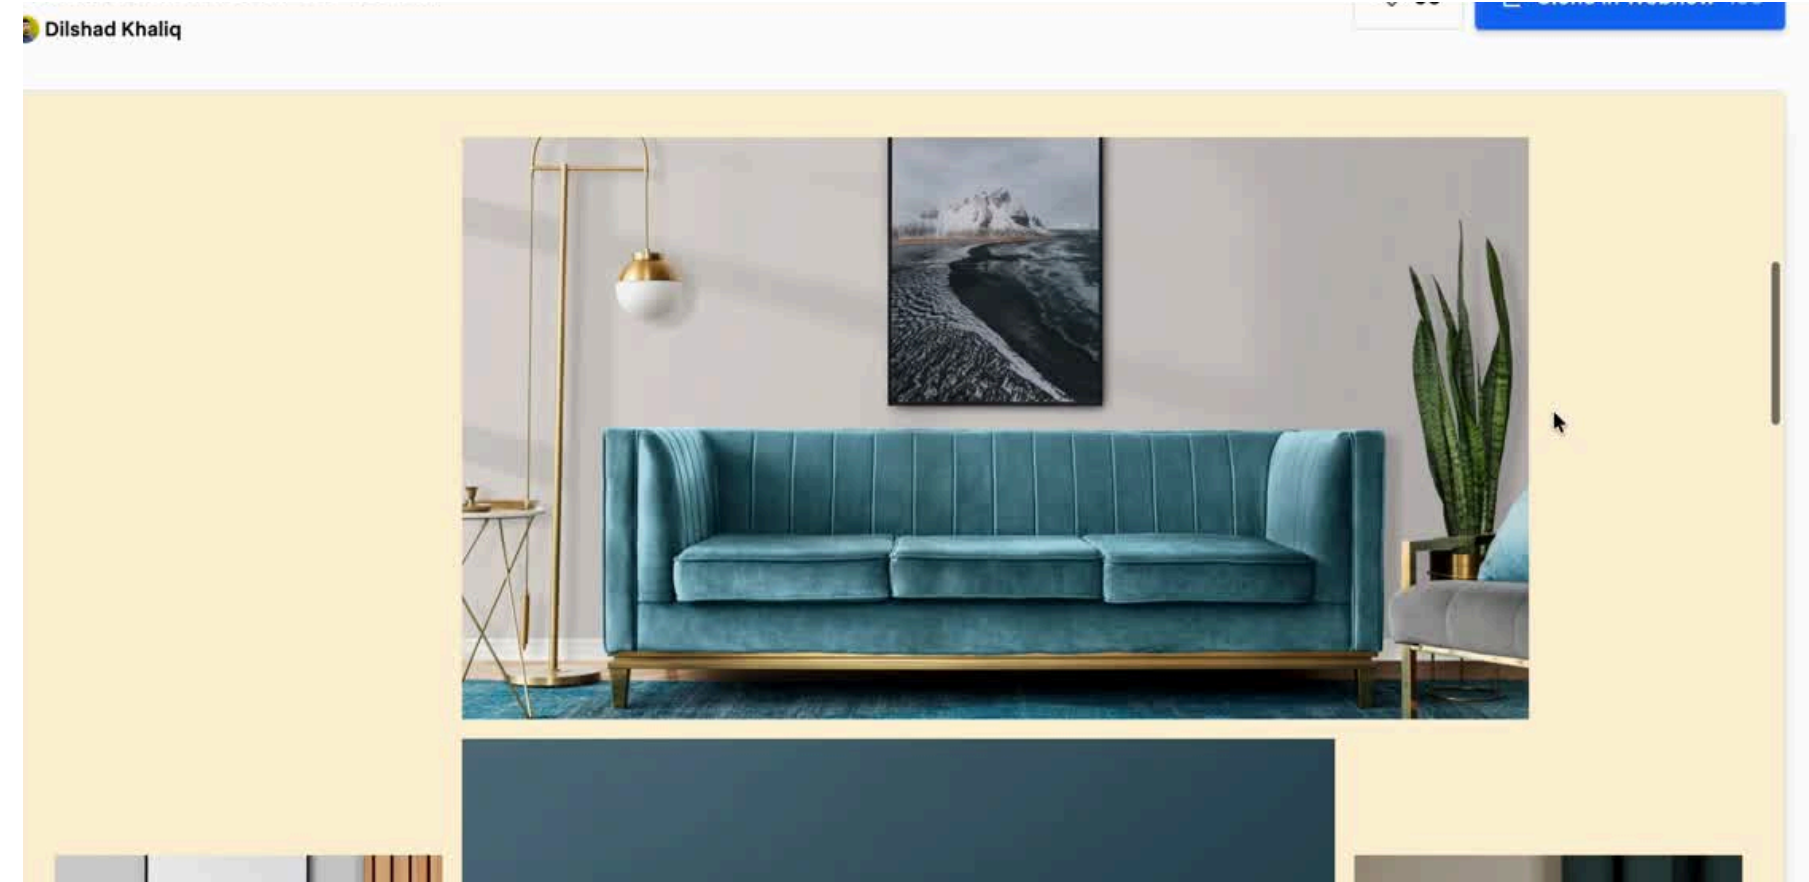

DISCUSSION

- Week-by-week deliverables made the project tangible and manageable
- Scrollytelling guides viewers through time, making crisis moments feel significant
- More user testing earlier would have caught issues sooner
- Would invest more time upfront evaluating which chart types best match each research question

FUTURE WORK

- Grid zoom while scroll animation
- More text citing my resources for credibility
- Click to stay on that information

THANK

YOU
